                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                               This cDNA clone, designated cDNA24, is derived from human gene whose mutated form is associated with hereditary haemochromatosis (HH). It was obtained from a directionally clonded plasmid-based cDNA library following identification of the HH locus in the HHA region of chromosome 6. A single mutation (24d1) in the HH gene a general responsible for the majority of HH disease. This comprises a G to A substitution that is present in 86% of affected chromosomes and in 4% of unaffected chromosomes. It results in a critical disulphide bridge important for secondary structure. The following are claimed: a 10825 bp genomic DNA sequence (1) (see AAP19669), the H437 bp cDNA sequence (1a) and their 24d1, 24d2 and 24d7, oar iants: a cloning or expression vector; host cells; a peptide product chosen from the HH gene product, its variants contact these forms and 24d7, or a peptide of at least 56 amino acid residues of these; an antibody produced using the peptide; a method codetermine the presence or absence of the common HH gene and taining and liferentiation factors and therapeutic agents for the HH disease; metal chelation agents. T-cell differentiation factors and therapeutic agents for the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the respectic of a nucleic acid sequence as above; and oligonucleotide directed against a transcriptional therapeutic agents for activity in connection with HH disease; an artisense oligonucleotide directed against a transcriptional the produce or pairs of oligonucleotide directed against a transcriptional the mitigation of involections also relates to methods for screening of the HH gene. The invanincian also relates to methods for screening diagnosis, and therapeutics, and small molecule for the hardened in the properties of the hardened in the properties of

These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            921 AACATCACCATGAAGTGGCTGAAGGATAAGCAGCCAATGGATGCCAAGGAGTTCGAACCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                              The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-call differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cDNA sequence encoding a histocompatibility iron loading (HFE) protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a human histocompatibility iron loading (HFE) protein. The HFE gene is a major histocompatibility (MHC) non-classical class I gene located on chromosome 6p. Mutations in the gene laad to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the disorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The method given in A96769 (Genbank Accession number U60319). The presence of the mutation indicates the disorder or the genetic susceptibility to the disorder. The method is used to diagnose an iron disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosing an iron disorder e.g. hemochromatosis or a genetic susceptibility to develop it, by determining the presence of a mutation in exon 2 or an intron of a histocompatibility iron loading nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 AAAGACGTATTGCCCAATGGGGATGGGACCTACCAGGGCTGGATAACCTTGGCTGTACCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-AUG-2000
                                                                                                                                    02-AUG-2001
This sequence represents the haemochromatosis (HC) gene. Mutations in this sequence are detected using the method of the invention. The method is for identifying an individual with hereditary haemochromatosis (HH) or a predisposition to develop HH or to genetically pass on HH to an offspring, comprising isolating a biological sample and amplifying a region of genomic DNA in the biological sample encompassing all or part of the DNA between markers D6S265 and D6S276, and detecting at least one homozygous or heterozygous mutation in a nucleotide within the region. The method can also be used for identifying an individual with an cutosomal recessive disorder (ARD) or predisposition to develop and/or genetically pass on an ARD to an offspring, comprises isolating a biological sample from the individual and screening genomic DNA in the sample for the presence of a homozygous or heterozygous mutation in a gene, the normal function of which, is required to prevent progression of the disorder. The method(s) can be used to identify individuals that are homozygous or heterozygous (carriers) for the mutation causing the ARD. Especially the method is used to diagnose HH or predisposition to HH by detecting a Cya282Tyr substitution. Individuals homozygous for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1040

```
The invention relates to novel genes (AAL34669-AAL37666) and proteins CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human proventing in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and prevention of: (a) cancer, e.g. breast and ovarian cancer and coher cancers of the atrenal gland, bone, bone marrow, breast, other cancers of the adrenal gland, bone, bone marrow, breast, and sleenes e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, and tiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular discorders such as myocardial ischaemias; (d) wound condity, e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1748 AAGACGTATTGCCCCAATGGGATGGGACCTACCAGGGCTGGATAACCTTGGCTGTACCC 1807

The invention describes an isolated nucleic acid molecule couprishing a gequence encoding misculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or the mucleic acid; stimulates re-vasculariastion of isohaemic tissues associated with conditions such as thrombosis, arterioscierosis, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis conditions, such as, Alzheimer's disease, Parkinson's disease, and neurohal damage occurring in certain disorders or neurodegenerative conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue cransports or bone grafts; prevents skin aging due to sunburn by stimulates growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains or stimulates growth used in combination with other cytokines; maintains correases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases or decreases the differentiation or proliferation of embryos; increases increases or decreases or decreases or decreases or decreases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1807
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                           Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer -
                                                                                                                                                                                                                The invention describes an isolated nucleic acid molecule comprising a

It results in a Cys to Tyr substitution in the encoded protein (see AAW34499) at a critical disulphide bridge important for secondary structure. The following are claimed: the HH gene motor DNA (1), a 1437 bp CDNA sequence (Ia) (see AAT96691) and their 24d1, 24d2 and 24d7, variants; a cloning or expression vector; host cells; a cestidues of these; an antibody produced using the peptide; a method residues of these; an antibody produced using the peptide; a method contained of the common HH gene mutation; an animal model for the HH disease; metal chelation agents, T-cell differentiation factors and therapeutic agents for the mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or mitigation of iron overload; a method for screening potential. Therapeutic agents for activity in connection with HH disease; an injeanse oligonucleotide directed against a transcriptional product of antiense oligonucleotide seawow; and oligonucleotides from cor pairs of oligonucleotides covering a range of nucleotides from cor pairs of oligonucleotides covering a range of mucleotides from the HH gene. The HH gene. The hH gene. The hH gene. The hH denney relates to methods for screening for the HH homovycores to the HH corrects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 AACATCACCATGAAGTGGCTGAAGGATAAGCAGCCAATGGATGCCAAGGAGTTCGAACCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hereditary haemochromatosis gene and variants - useful for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This genomic DNA sequence corresponds to the human gene whose mutated form is associated with hereditary hemochromatosis (HH). To identify this novel gene, allelic association patterns were determined between known markers and the HH locus in the HLA region of chromosome 6. A physical clone coverage was then generated extending from D65255, which is a marker that is centromeric of HLA-A, in a telomeric direction through D65276, a marker at which the allelic association was no longer observed. A single mutation (24d) in the HH gene appears responsible for the majority of HH disease. This comprises a G to A substitution that is present in 86% of affected chromosomes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               i

The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                               New hereditary hemochromatosis gene products or polypeptides, useful for treating hereditary hemochromatosis in a patient, and as a metal chelation agent alleviating iron overload -
                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

/note="Organ: Stomach; Vector: pME18-FL3; Site_l: XhoI;
/site_2: XhoI; The poly (A) + RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including Sfil
site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized with Supersoript II using Sfil
olgo-dT primer. After first strand synthesis, RNA was
degraded by NoOH treatment and cDNA was amplified by PCR
reaction. The PCR products were digested with Sil and
cloned into DraIII - digested pME188-FL3 vector. The
obtained cDNA vectors were used for transformation of
competent cells E. coli ToplOF' by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched cDNA library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The control of the co

CDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP CDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP CDNAs whose availability will be considered under appropriate and limited collaborative arrangements The tissue for this library was contributed by Dr. Xin-Yuan Fu, Yale University School of Medicine The following repetitive elements were found in this CDNA sequence: 1-31, >(CAG
